

Windows client to Linux server via openssh (git)

-
1. install Git on Windows.
 2. create private/public key pair via ssh-keygen.
 3. append content of public key to authorized_key via ssh-copy-id
(ie.: ssh-copy-id id_rsa.pub user@server.com)
 4. on client launch git bash then execute the following:
 - cd ~/.ssh
 - eval \$(ssh-agent)
 - ssh-add id_rsa
 5. close client git bash session and open another one
 6. connect to server via ssh user@server.com
